

New England Thinstones

Cambridge Tan Mosaic

Real Stone • Real Thin • Real Simplesm

From fieldstone, weathered over years, to granites and smooth river rounds, we gather a variety of organic blends, dramatic textures and distinctive tones to produce the finest selection of veneer stone available. Our natural thin stone veneer is genuine New England stone harvested from mountains, fields, woodlands, and quarries

New England Thinstones currently offers 14 colors and tones in up to 4 styles each. From new commercial construction to residential renovations, our veneer stone is perfectly suited to a wide array of interior and exterior applications...from fireplaces, interior surfaces or facades to wine cellars, chimneys or foundation cladding. At New England Thinstones, we harvest the stone and procure it ourselves, selecting only the finest available in New England. We use the latest and most advanced cutting technology available, producing perfect corners and flats finished with a consistent profile and industry leading proportions.

Increasing numbers of masons, builders and homeowners are discovering the substantial labor and time saving benefits of using natural veneer stone rather than much denser full dimension stone. Cladding with Thinstones also reduces the need to use structural footings, and Thinstones offers the advantage of approving the final wall layout prior to installation. Constant efficiency improvements in our production process have enabled us to become price competitive with manufactured stone products, until recently thought of as the only cost effective option.

Depending upon how it is cut, our thin stone offers a variety of unique looks and characteristics, ranging from rustic to refined. Our thinstone is durable and naturally suited to any climate conditions.

In addition to natural New England Thinstones we also offer options in antique thin bricks, pavers or Belgian blocks and provide services for veneer stone projects with customized specifications. Flagging, treads, and larger slabs are available to match most of our Thinstones line.

Freight costs are significantly reduced because our product is thin by nature, enabling us to ship up to five times the face coverage of conventional stone per truckload, bringing the warmth of authentic New England stone to all corners of the country.

Our sturdy pallets can be stacked 3 high, saving precious space on challenging jobsites. Our exclusive option of tote packaging is a great advantage for interior projects or buildings with elevator access.

Packaging:

Flats:	Corners:
200 sq. ft./pallet	50 linear ft./pallet
100 sq. ft./pallet	8 linear ft./box/tote
50 sq. ft./pallet	
8 sq. ft./box/tote	

New England Thinstones is 100% natural stone. Shade and color variations are to be expected.

It's all about the corners... A common refrain from experienced stonemasons underscores the importance of a well proportioned corner precision cut to ninety degrees. The corner piece is the first to be installed and ultimately sets the bar for the standard of the finished work. Corners cut by hand on a table saw are limited in size, often not squared and will likely break if sawn with an over-cut. We use an automated corner saw, the only one of its kind in the country, with two blades set at right angles to one another capable of producing twenty inch long pieces with a consistent thickness. The larger the piece, the more options a mason will have to resize and reshape it.

New England Thinstones

Jerusalem Thinstones

New England Thinstones announces the introduction of our new and exclusive collection of Jerusalem Stone Veneers. We are proud to have been selected by A. Grebelsky & Son to be their importer and distributor of the only Jerusalem Thinstone veneer available in the United States. A. Grebelsky & Son, founded in 1923 is the oldest Jerusalem stone quarry, producing some of the most sought after stone and marble in the world.

Their portfolio includes the Metropolitan Museum of Art and the Bank of America headquarters in New York. The Trump Hotel & Towers in Chicago, HBO headquarters in Santa Monica California and the Mass Maritime Academy in Massachusetts.

Jerusalem Stone is famous for its understated style and elegance, and its origins evoke a symbolism that resonates with culture and history.

Until now Jerusalem Stone has been considered exclusive and cost prohibitive, to be specified only when compromise in aesthetics is not an option. However, by making it available in natural thin veneer form, New England Thinstones will bring Jerusalem Stone, one of the more favored elements of high end architects and builders, within reach of many more projects.

This unique stone lends itself to many interior and exterior environments, both residential and commercial.

Increasing numbers of architects, builders and

homeowners across the country have been specifying New England Thinstones' traditional New England stone veneers instead of full dimension stone to take advantage of the significant savings in time, material, freight and labor expenditures.

By keeping a large Jerusalem Stone inventory in our Connecticut facility, turn around and delivery times are kept to a minimum anywhere in the U.S.

All colors and blends shown are available in all cuts. We also supply Jerusalem Stone finished in forms other than thinstone.

Jerusalem Stone is 100% natural stone. Shade and color variations are to be expected.

All colors and blends shown are available in all cuts.
